Announcing QPoly LCC *Fluoroelastomer Business Expansion*

Specialty Products & Polymers Inc is excited to announce the launch of QPoly LLC, a dedicated Fluoroelastomer mixing operation.

Since 1995 Specialty Products & Polymers Inc has focused on supplying high value silicone compounds. In addition, we have also mixed Fluoroelastomer (FKM) since 2007. After 10 years in operation, the time has come to split the two operations, allowing the proper strategic focus on each.

Effective May 1st, 2017, all current Fluoroelastomer operations will be transitioned to the QPoly LCC business. For the immediate transition there will be no changes in raw materials, formulations, equipment, process, or location. SP&P will continue to manufacture products on behalf of QPoly LLC. Going forward, QPoly will invest in new equipment, capacity, capabilities, inventory and eventually a standalone location. These changes are expected to take place towards the end of 2017 with a full transition by January 1st 2018. Customers will be notified as the changes take place and we will work closely with everyone as needed to ensure a smooth transition.

All inquiries can be directed to Michael Shaul at the following addresses:
